👤 Profile

Highly motivated and detail-oriented graduate software developer with a solid academic background, and hands-on experience in programming, web development, and software design. Proficient in programming languages such as HTML CSS, and JavaScript, I have developed skills in both front-end and back-end development, and understanding of control systems like Git.

I have equipped valuable experience in Agile methodologies, software design patterns, and database management.

💼 Work Experience

2023 – Current

ABT Telecoms
Software Developer Intern

- I had an essential role in development of an Insurance Admin Portal. Collaborating closely with cross-functional teams, I contributed to designing and implementing a user-friendly interface.
- As a Team Leader i had a central role in planning and executing software development project. Define project goals, create timelines, and set priorities using software applications like Jira. You ensure that the team is aligned with project objectives and deadlines.
- I have been using the Black Box Testing method to examine the application functionality.
- Visualizing and analyzing data using PowerBi
- I embarked on a network project, mainly configuring network access points, and solar installation training

💼 Projects
